Opgaven skal løses individuelt, men afleveres som del af gruppeafleveringen:

- Opgaven omhandler de 3 korte noter, altså Note 1, Note 2 og Note 3. (*)
- Svarene på spørgsmålene skal placeres i et afsnit i rapporten markeret med studienummeret.
- Al tekst i svarene skal være på engelsk (omfang cirka en halv side alt i alt).
- (*) Der kommer ikke opgaver til den skriftlige eksamen i de 3 korte noter.

Afleveringsopgave 5 består desuden af Opgave 1 og Opgave 3 i separate filer.

Opgave 2 — MUST BE ANSWERED IN ENGLISH

Consider the following program:

```
import java.util.*;

public class Main {
   public static void main(String[] args) {
      List<Integer> a = new ArrayList<>();
      a.add(40);
      a.add(41);
      a.add(42);
      myst(a);
   }

   public static void myst(List<Integer> a) {
      if (a.size() > 0) {
        System.out.println(a.remove(a.size() - 1));
        myst(a);
    }
   }
}
```

Printed output:

42

41

40

Find information about the ArrayList methods in the textbook, Appendix A: Java Summary.

5-2-1

Describe the ArrayList content of the variable a just before the first myst call (in main).

5-2-2

Describe the ArrayList content of the variable a just before the recursive myst calls (in myst).

5-2-3

Describe the overall functionality of the program and also describe a small change such that the printed output is as follows:

- 40
- 41
- 42

The modified program should not be included in the assignment submission.
